Art Unit: 1761

Claims 4-7 are objected to under 37 CFR 1.75© as being in improper form because a multiple dependent claim cannot depend on another multiple dependent claim. See MPEP § 608.01(n). Accordingly, claims 4-7 have not been further treated on the merits.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 3 are indefinite as to “(a partial hydroly(z)ate of the milk whey protein)” as parentheses are not allowed in the claims. It is not clear whether Applicant intends to claim this limitation.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Han et al.

Art Unit: 1761

Han et al teach a method of producing cheese comprising adding a milk whey protein product to the material milk , adding transglutaminase, and then subjecting to additional cheese processing steps (see entire patent).

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Rhodes.

Rhodes teaches a method for making an enhanced cheese product comprising adding a whey protein to the cheese process (see entire patent, especially the Examples).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rhodes or Han et al in view of Monti et al.

Rhodes and Han et al are cited as above.

The claim differs as to the use of trypsin.

Monti et al disclose the conventional use of trypsin to increase the solubility of whey protein (see abstract).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to use trypsin as taught by Monti et al in either that of Rhodes or Han et al

Art Unit: 1761

because the use of trypsin serves to increase the solubility of whey protein and consequently makes it easier to incorporate into a cheese product.

All of the claim limitations have been considered. None of them are seen as serving as basis for patentability.

No claim is allowed.
